

COVID-19 UPDATE

As we continue to monitor and respond to the evolving developments surrounding COVID-19, we want to provide you with an update on the steps we are taking to protect the health and safety of our employees, customers, and the communities we serve.

Most importantly, the drinking water we supply is safe and can be used as normal. The Centers for Disease Control and Prevention <https://cdc.gov> the Environmental Protection Agency <http://epa.gov/coronavirus> and the World Health Organization <https://www.who.int/emergencies/diseases/novel-coronavirus-2019> have explained that there is no evidence that the COVID-19 is or can be transmitted through drinking water, and the safeguards we already use to protect water quality are effective to protect against viruses.

Those who live in our service area do not need to stockpile bottled water in the midst of growing fears about the spread of COVID-19. Your tap water is safe to drink. Please refer to the above cited websites for more information.
